

cristino agapito jr

Django Systems Developer | Workflow Automation Specialist | GovTech Builder

cristinoagapitojr@gmail.com | +63 935-886-2771

github.com/tepong32 | sites.google.com/view/teppy

Systems-focused developer and operations specialist with hands-on experience translating real-world LGU, finance, and citizen-service workflows into practical software solutions. Strong background in accounting operations, process validation, records integrity, and workflow optimization, now applied to Django-based civic platforms and automation tooling.

Currently building TracePoint, a citizen assistance lifecycle platform designed to reduce processing delays, improve request transparency, and evolve into a reusable GovTech SaaS foundation for local government units. Core strengths include Django systems design, workflow lifecycle architecture, Excel automation, process mapping, Linux deployment fundamentals, and AI-assisted engineering workflows.

Education

Bulacan State University

Bachelor of Science in Business
Administration
2007-2011

Tech Stacks

Backend & Systems: Python, Django, DRF, Linux, Git
Automation & Desktop: Tkinter, Openpyxl, Excel workflow design

Frontend: HTML, CSS, JavaScript

Workflow Strengths: lifecycle engines, validation systems, process mapping, government workflows, AI-assisted engineering

Professional Experience:

Accounting Clerk / Process Automation & Systems Support

Municipality of Bocaue (2022 - Present)

- Built process-improvement templates and validation workflows for accounting operations.
- Performed reconciliation and micro-auditing of municipal and barangay receipt records.
- Supported digital records integrity, reporting accuracy, and office technical troubleshooting.
- Designs Django-based civic workflow solutions outside office hours, including TracePoint.

BPO Operations

Conduent / Concentrix (2017-2019)

- Managed high-volume billing, AP, and customer workflows across chat, phone, and email channels.
- Introduced reusable response templates that improved CSAT consistency and team adoption.
- Strengthened process documentation, escalation logic, and issue-resolution workflows.

Earlier Roles — Banking & Data Operations

Accenture / Bank of America (2012-2014)

- Handled claims validation, account servicing, client education and payment workflow verification with high accuracy.

Selected Technical Projects

TracePoint — GovTech Assistance Lifecycle Platform (WIP)

Django · DRF-ready architecture · lifecycle engine · secure citizen tracking

- Designed a modular citizen assistance workflow platform for LGUs.
- Built secure request tracking via tracking codes and edit links.
- Implemented lifecycle-ready request states, document recovery loops, and timeline logging.
- Structured architecture for notification adapters (Email + SMS baseline).
- Positioned as a reusable SaaS-ready civic workflow product.

Excel Workflow Automation Toolkit (Production-used)

Python · Tkinter · ttkbootstrap · openpyxl

- Developed a desktop data-entry and validation toolkit used for LGU reporting workflows.
- Mimics Excel-like editing while enforcing custom validation rules.
- Supports file-based configuration for reusable business logic.
- Reduced repetitive cleanup work for daily collections and salary reconciliation.
- Expanding toward warning detection, multi-sheet validation, and template governance.
